

Changes to the Specification:

Please replace paragraph [0030] with the following paragraph:

[0030] Figure 2a, wherein like reference numbers refer to like components in Figures 1a-1d, shows another embodiment of a motorized cover system 10A including two left side linkages 66C and 66E and two right side linkages 66D and 66F. The linkages 66C-66F move cover 14A from a first closed position shown in phantom to a second position shown with solid lines which is substantially above a vehicle compartment 36A. Linkages 66C-66F then move the cover 14A to a third position shown with phantom lines in which the cover 14A is at least partially over a vehicle ~~a vehicle~~ front windshield 89. Alternatively, in the third position, the cover may translate to a position at which it is at least partially over a vehicle roof 88. Accordingly, the cover 14A is translated with respect to the vehicle from the first position to the third position. In the first position, the cover 14A closes the vehicle compartment 36A. In the second and third positions, the vehicle compartment 36A is substantially exposed. The invention also contemplates the use of a motorized cover system 10A on a vehicle that does not have a roof. In that case, the cover 14A would be at least partially over the passenger compartment 50 in the third position shown in Figure 1a.
